Cool Dog Facts:

Why are dogs' noses so wet? Dogs' noses secrete a thin layer of mucous that helps them absorb scent. They then lick their noses to sample the scent through their mouth.

It's not so black and white. It's a myth that dogs only see in black and white. In fact, it's believed that dogs see primarily in blue, greenish-yellow, yellow and various shades of gray

Express yourself. Dogs' ears are extremely expressive. It's no wonder! There are more than a dozen separate muscles that control a dog's ear movements.

Why do they do that? When dogs kick after going to the bathroom, they are using the scent glands on their paws to further mark their territory.

Growing up. While the Chow Chow dogs are well known for their distinctive blue-black tongues, they're actually born with pink tongues. They turn blue-black at 8-10 weeks of age.

Americans love dogs! 62% of U.S. households own a pet, which equates to 72.9 million homes

Move over Rover! 45% of dogs sleep in their owner's bed (we're pretty sure a large percentage also hog the blankets!)
